NEG. ALB. P. 426

In recent years many metal pots have reached the
Glongot through trade. However, some of the women
are still excellent potters:

They knead the clay with their hands, in order to
remove gravel and lumps, and then shape the pots
with their hands. A portion of a broken disk generally
serves as a crude potter's wheel and is turned with
the hands. The final shaping is done with wooden
saddles in which designs have been cut. When these
are pressed against the damp clay they leave a
decorative imprint. The pots are then fired and
are ready for use.
