People Ilongot.

Name Earthen cooking pot. Round bottom. Bulging sides.

Narrow rim encircling mouth. Marks of paddle, used in making of bowl, upon entire exterior surface.

Over.

Collection R. F. Cummings Expedition, (Wm. Jones, Collector 1908=09).

NEG. ALB. P. 426

Notes

Acc. 1096

Width Length Height Price

In recent years many metal pots have reached the Ilongot through trade. However, some of the women are still excellent potters.

They knead the clay with their hands, in order to remove gravel and lumps, and then shape the pots with their hands. A portion of a broken dish generally serves as a crude potter's wheel and is turned with the hands. The final shaping is done with wooden paddles in which designs have been cut. When these are pressed against the damp clay they leave a decorative imprint. The pots are then fired and are ready for use.
