LOCATION:

Provenance: China

People: Chinese

Description:

Small bronze mirror without rim and with a very minute loop handle. The all-over incised design is a whorl circle, with four large comas filled with striations and outlined by plain bands. All the remaining area is filled with spiral design in which many of the units are peculiarly angular. The mirror is extremely thin, and the knob may be called "primitive". Mr. Farley believed the mirror to be very early.
