Top is notched & piece of wood tied in so it will rattle when stick is thrust in the ground. Fitted with cotton attached. (over)

Notes: Compare with tugdas. 2
the Cayanos.

Width: Length: Height: Price: Trade
The pointed stick is thrust into the ground, making a shallow hole into which the seed rice is dropped. A small section has been cut off near the top and re-attached by means of a cord, thus forming a rattle. This union of working instrument and rattle or clapper, is found on the Island of Ceyso, as well as among the tribes of Southern Mindanao.
