

ANCON PROJECT RECORDING FORM

AGE/SEX, STATURE, AND DENTAL WEAR & PATHOLOGY

Site Name/Number Ancon / 1 Observer MJP

Feature/Burial Number 1 Date 2/22/2010

Burial/Skeleton Number 40005 / 1

Present Location of Collection 2408 01.13

Estimated Sex M Age & Sex
Estimated Age 50+

Comments:

*definitely male - as corac & cranium agree
heavy alveolar resorption
vertical margin eroded*

Stature

Femur: Maximum Length: distance from the most superior point on the head of the femur to most inferior point on the distal condyle. Place the medial condyle against the vertical endboard while applying the movable upright to the femoral head. Use the right femur unless incomplete or absent.

Tibia: Length: distance from the superior articular surface of the lateral condyle to the tip of the medial malleolus. Place the tibia on the osteometric board, resting on its posterior surface with the longitudinal axis parallel to the instrument. Place the lip of the medial malleolus on the vertical endboard and press the movable upright against the proximal articular surface of the lateral condyle. Use the right tibia unless incomplete or absent.

Femur Length (cm) 41.4 Tibia Length (cm) 34.9

Comments:

Dental Inventory

Tooth Presence: code 1-8 (see *Standards*). **Occlusal surface wear:** use left teeth, following Smith (1984) for anterior teeth (code 1-8) and Scott (1979) for molars (code 0-10). If marked asymmetry is present, record both sides. Record each molar quadrant separate in the spaces provided (+) and the total for all four quadrants under "Total." **Caries:** code each carious lesion separately (1-7); **Abscesses:** code location (1-2).

	Tooth Presence	Wear/Total	Caries	Abscess
