English: This is the first field guide to the amphibians of Nayarit, intended to help with their identification. It serves as a tool for those interested in the state's herpetofauna, and highlights the importance of recognizing species that are vulnerable or at risk. It is worth noting that no amphibian in the state of Nayarit is poisonous.

Spanish: Esta es la primera guía de anfibios de Nayarit para ayudar a identificar, sirviendo como herramienta para todos aquellos interesados en la fauna silvestre de herpetozoos, resaltando la importancia en conocer aquellas especies que representan algún estatus de riesgo. Tomando en cuenta que para el estado ninguna especie de anfibio presenta veneno.
