*Terminalia* L. *sensu lato* (Combretaceae), including the former genus *Buchenavia*, is a genus of mostly trees represented in Brazil by 39 species. These are recorded from the phytogeographic domains of the Amazon Rainforest, Caatinga, Central Brazilian Savanna, and Atlantic Rainforest. For the state of Ceará, in the Northeast region, seven species of *Terminalia* s.l. have been recorded here, mainly in the Ombrophilous Forest (Brejos de altitude).

The production of field guides is one of the contributions of the "Flora do Ceará Project: knowledge for conservation," that seeks to inventory the flora of Ceará and facilitate species identification by researchers and non-specialists.
