[fieldguides.fieldmuseum.org] [1523] version 1 6/2023

La Florida Regional Park is located at the coordinates 04 ° 43.594 north, and -74 ° 09.023 West at 2546 meters of altitude in the northwest of the city of Bogotá, Colombia. It is bordered to the north by the La Florida industrial area on 80 street, to the east by the Engativá neighborhood and the Jaboque wetland separated by the Bogotá River, to the west by the La Florida golf club in the municipality of Funza, and to the south by the El Dorado International Airport. The park has six land covers, including two covers with around ten years of restoration process, two without restoration (a mixed forest plantation, a eucalyptus plantation and a recreational zone), one of a natural wetland habitat and a lake. The categories of guilds established by Stiles & Roselli (1998) were adapted according to the characteristics of the area, taking the following guilds: IAE: aerial insectivore, IHSM: falconer insectivores below the canopy (understory and medium level of vegetation), IHDB: canopy and vegetation edge falconers, ISFS: lower understory foliage and soil insectivores, IFSM: mid-level foliage and slender branch insectivores, IDFB: canopy and edge foliage insectivores, IIPA: insects and aquatic invertebrates or of the water's edge (lake and bodies of water), ITR: insects or very small vertebrates on or in thick trunks and branches, CAV: hunters (stalking or chasing) of large and small vertebrates, CAR: scavengers, FSSB: soil and low understory fruit and seed pickers, FPDB: canopy and border small fruit consumers, SPCG: small compost and grass seeds, NEC: consumers of flower nectar and VEG: vegetation. and the status categories according to the state, according to Avendaño et al. (2017), which include the following: R = resident; RE = endemic; MB = boreal migratory; MA = southern migrant; Int = introduced, complemented by Chaparro et al. 2013, taking the category CE = Nearly Endemic. The extinction risk categories were also taken according to the evaluation made by Renjifo et al. (2016), for species resident in the country, supplemented with information on migratory species and with distribution in other countries available in IUCN (2020).
